LISTING OF CLAIMS

The listing of claims provided below replaces all prior versions, and listings, of claims in the application.

5   1.   (Original)   A method for using a token to sign an unsigned binary comprising:

signing an unsigned binary on a first computing device to obtain a first signature;

downloading said first signature and said unsigned binary to a second computing device;

10   using a token coupled to said second computing device to sign said unsigned binary to obtain a second signature; and

comparing said first and second signatures.

2.   (Original)   The method of claim 1 further comprising:

15   using said unsigned binary on said second computing device, if said first and second signatures match.

3.   (Original)   The method of claim 1 further comprising:

rejecting said unsigned binary on said second computing device, if said first and

20   second signatures do not match.

4.   (Original)   The method of claim 1 wherein said token is a smart card.

5.   (Original)   The method of claim 1 wherein said first computing device

25   is a server.

6. (Original) The method of claim 1 wherein said steps of signing and using use identical hashes.

5   7. (Original) The method of claim 1 further comprising:

encrypting said unsigned binary and said first signature.

8. (Original) The method of claim 7 further comprising:

de-crypting said encrypted unsigned binary and first signature.

10

9. (Original) A computer program product comprising:

a computer usable medium having computer readable program code embodied therein configured to use a token to sign an unsigned binary, said computer program product comprising:

15   computer readable code configured to cause a computer to sign an unsigned binary on a first computing device to obtain a first signature;

computer readable code configured to cause a computer to download said first signature and said unsigned binary to a second computing device;

computer readable code configured to cause a computer to use a token coupled to

20   said second computing device to sign said unsigned binary to obtain a second signature; and

computer readable code configured to cause a computer to compare said first and second signatures.

10.   (Original)   The computer program product of claim 9 further

comprising:

computer readable code configured to cause a computer to use said unsigned

binary on said second computing device, if said first and second signatures match.

5

11.   (Original)   The computer program product of claim 9 further

comprising:

computer readable code configured to cause a computer to reject said unsigned

binary on said second computing device, if said first and second signatures do not match.

10

12.   (Original)   The computer program product of claim 9 wherein said

token is a smart card.

13.   (Original)   The computer program product of claim 9 wherein said first

15   computing device is a server.

14.   (Original)   The computer program product of claim 9 wherein said

computer readable code configured to cause a computer to use and said computer

readable code configured to cause a computer to sign use identical hashes.

20

15.   (Original)   The computer program product of claim 9 further

comprising:

computer readable code configured to cause a computer to encrypt said unsigned

binary and said first signature.

25

16.   (Original)   The computer program product of claim 15 further

comprising:

computer readable code configured to cause a computer to de-crypt said unsigned

binary and said first signature.
